UKRAINIAN ID

International Economic  
Humanitarian Forum

## DEAR FRIENDS!

Kaniv, the heart of Ukrainian culture and Ukrainian spirit, hosted the most important intellectual forum in Eastern Europe - Ukrainian ID for the second time.

Two days of our intense, but at the same time, honest and open conversation about the most acute issues, have become history.

But our work does not end there - we just take it from here.

Never before has humanity faced so many challenges that would threaten our existence. Global Information Warfare and the Dangers of a New World War Conflict. Social and economic inequality in society and between nations. The crisis of traditional power engineering.

The scope of an ecological catastrophe as a possible consequence of civilization development.

But - a paradox! Never before did mankind cherish so much hope and did we drive such a persistent struggle for our own future.

And this struggle should be headed by those who are guided by values.

Leaders of the world can not be functionaries, who easily change their own ideology, based only on market conditions, ratings and election results. Politicians who have no ideals and for whom the truth and lie change every day interchangeably - are unworthy and can not manage societies, especially in times of such violent changes that we are living today.

UKRAINIAN ID

International Economic  
Humanitarian Forum

## WE, THE MEMBERS OF THE UKRAINIAN ID FORUM,

call on politicians of Ukraine and the rest of the world to build their leadership on the foundation of values. Values that have to undergo a rigorous revision in view of the challenges that humanity faces.

We must formulate and cultivate values that will provide us with a way forward.

According to the results of this year's Forum, a Constitution of values - a symbolic document that brings together all those key suggestions, visions and strategies presented by the participants of the Ukrainian ID was created. We argue that Ukraine's development as a part of the civilized world is only possible under the condition that our country works on solving

the global issues side by side with advanced partners.

We urge Ukrainian authorities to take immediate action to resolve the challenges relevant both for our country and for the whole planet.

**First challenge:** Human Security in the world, which is changing so fast. Physical security and health, protection from information attacks and build-up infrastructure, access to culture and education as a prerequisite for personal development. Only if society meets all the key human needs will a human be really protected. Only if we determine a person as the highest value at the state level can we solve the problem of humanitarian security.

We call for responses to these challenges by creating a new state policy which meets human needs. The policy, which - we emphasize! - must enforce democratic rights of a society and an individual, and not endanger them, similar to authoritarian or totalitarian regimes.

**The second challenge** is inequality: social and economic, inequality of access to resources or opportunities for self-realization.

Ukraine should take an active part in solving the problem of women's representation in Ukraine government. 54% of our population are women. yet, women control less than 10% of economic resources in Ukraine the percentage of women's presence in the Ukrainian parliament is 12% this indicator puts us on the last place in Europe.

We can solve this problem by basing on the value of justice.

We have to break the "glass ceiling" that inhibits more than half of our society from achieving leadership and effectively create our common future.

We insist that Ukraine has to ensure the rules of proportional representation of women in the power of all levels and introduce responsibility for the heads of those bodies and organizations who will not comply with these requirements on a legislative level.

**The third challenge** for the entire planet is the rescue of the environment.

Global warming, driven by our technological development, threatens life on earth. We are destroying biodiversity - every day through human action all kinds of animals, birds, fish and insects disappear.

**UKRAINIAN ID**

International Economic  
Humanitarian Forum

Mankind in its majority still prefers to shy away from this terrible result of its activities

We argue: we have no moral right to ignore this problem. Since by doing this we are destroying the future in which our children could live.

The value of responsibility towards our own future will help us prevent the catastrophe.

We demand that the governments of Ukraine and the rest of the world reduce the pressure on the ecology of the planet and pass it on to the next generations of mankind.

That is why, we emphasize the importance of developing the alternative modes of transport and the use of new energy resources instead of oil, natural gas and coal.

We are absolutely confident that Ukrainian legislation should provide for a deadline to stop using technologies that cause damage

to the entire planet. We have to leave outdated inventions and knowledge in the past - to secure the right to the future.

The Flame of the Revolution of Values has lit on the Tarasova Mountain.

We continue our journey and invite everyone who is ready to change the future of Ukraine and the world. Everyone who shares our values and is ready to make the most daring Revolution that our civilization needs.

**SEE YOU IN KANIV  
IN 2020!**
